Skills

Languages: Python, JavaScript, TypeScript, SQL, HTML5, CSS3 **Frontend:** React, Next.js, Angular, Recharts, Chart.js, Tailwind CSS **Backend:** Python (Django, FastAPI, Flask), Node.js (Express), RESTful APIs, Microservices **Db:** PostgreSQL, Redis, MySQL, MongoDB, Query Optimization, Schema Design **Cloud & DevOps:** Azure, AWS, Docker, CI/CD, GitHub Actions **Tools:** Git, pytest, Jest, Selenium, Webhooks, OAuth **Cert:** AWS Certified Solutions Architect - Associate **AI - Assisted Dev & API:** Cursor, Claude Code, ChatGPT-4o, Cursor, Antigravity, LLM and Vid Gen APIs

Experience

Software Engineer, ChiEAC - Chicago, IL (Remote) Jun 2025 - Present

- Built AI document processing features using React, Python (FastAPI), and Claude API, reducing manual data entry time by 66% (6h → 2h) by automating transit report classification and extraction for 3 city departments
- Developed analytics dashboard with React and TypeScript displaying real-time KPIs from Azure Synapse and PostgreSQL to standardize 12 metrics used by executive leadership and reduce query times by 40%
- Implemented RESTful API endpoints using FastAPI and deployed with Docker on Azure, eliminating weekly manual report generation for operations team while maintaining 99.5% uptime through error handling and retry logic
- Designed ETL pipelines using Airflow and Delta Lake to process daily transit data feeds, working with senior engineer to establish CI/CD workflows via GitHub Actions that cut deployment time from 2 hours to 30 minutes

Software Engineer, ISQL Global - Remote Oct 2022 - Jul 2023

- Built CRM features for roofing contractors using Angular frontend and Django REST backend, reducing customer quote generation time by streamlining workflow forms and optimizing PostgreSQL queries for 2,000+ monthly quotes
- Implemented automated testing and CI/CD pipelines using GitHub Actions and Docker, ensuring 99.9% data quality reliability and enabling rapid deployment of schema changes across microservices architecture
- Integrated Google Maps Geocoding API for address validation, Stripe for payment processing, and Twilio for SMS notifications, reducing manual address corrections and payment follow ups by 15 hours/week
- Optimized slow running database queries by adding indexes and implementing Redis caching for session data, improving page load times by 35% and reducing AWS RDS costs by 15% through connection pooling

Software Engineer, Out In Dreams - Remote Sep 2021 - Oct 2022

- Built payment automation system using Python and Stripe Connect API, eliminating manual spreadsheet based payments for influencers and reducing finance team workload by 20 hours/week through automated payout and it helps reducing payment errors for \$87K+ annual payouts
- Created analytics dashboard using Next.js and Chart.js that pulled data from Google Ads and Instagram APIs, giving marketing team unified view of campaign performance and reducing manual report
- Optimized PostgreSQL queries and analyzed creator engagement data to identify retention opportunities, resulting in 18% improvement in quarter-over-quarter retention through data driven feature prioritization

Projects

National EV Charging Infrastructure Analytics [Github](#)

- Developed a data ingestion and analytics platform for 83k+ EV charging station records, utilizing (GCS) and BigQuery
- Deployed an interactive dashboard to visualize network coverage gaps, processing large scale geospatial data to identify underserved regions.

GPU Cluster Telemetry & Observability System [Github](#)

- Built a scalable observability platform using Python and DuckDB to monitor GPU cluster performance, ingesting 10M+ trace rows for granular utilization tracking.
- Implemented an IsolationForest machine learning model to detect abnormal cluster behavior, reducing false alerts

Education

Illinois Institute of Technology - Master of Information Technology

SREC - Bachelor of Computer Science and Engineering
